Most patients in the ICU have more than one IC risk factor. How many of these risk factors does your patient have?

- Candida colonization (multifocal)*
- Gastrointestinal surgery or perforation
- Solid tumors
- Central venous catheter
- Transplant recipient (SOT or SCT)
- Immunosuppressants
- Critical illness
- Broad-spectrum antibiotics
- Long-term ICU stay
- Diabetes mellitus
- Transplant recipient
- Critical illness
- Neutropenia
- Transplant recipient
- Critical illness
- Mucositis
- Hemodialysis
- Injection drug abuse
- Mechanical ventilation
- Total parenteral nutrition
- COVID-19

SCT = stem cell transplant; SOT = solid organ transplant.
*Multifocal colonization means Candida has colonized 2 or more noncontiguous body sites.
